Professional Summary

Computer Science graduate and Junior Back-End Developer with experience building RESTful APIs and web applications using Node.js, Express, React, PostgreSQL, and MongoDB. Strong foundation in OOP, data structures, and software engineering principles, with a focus on writing clean, maintainable code.

EDUCATION

Faculty of Science – Zagazig University

Oct 2019 - Feb 2025

Bachelor of Science in Computer Science & Mathematics

Relevant Coursework: Object Oriented Programming, Data Structures & Algorithms, Computer Architecture, Operating Systems, Computer Networks, Databases

TECHNICAL PROJECTS

Keeper - Note-Taking Web App [[GitHub](#)]

- Engineered a responsive note-taking application inspired by Google Keep, leveraging React for dynamic UI updates.
- Implemented efficient state management to handle real-time note creation, editing, and deletion.
- Designed a modular component architecture to ensure code reusability and maintainability.

Jokes RESTful API [[GitHub](#)]

- Built a RESTful API using Node.js and Express.js to manage a joke collection with full create, read, update, and delete functionality
- Designed 8+ endpoints, including random joke selection, type-based filtering (Science, Puns, Dad Jokes), and partial resource updates
- Implemented master key authentication for protected operations like bulk deletion

Question-and-Answer System [[Github](#)]

- Developed a console-based Q&A platform with user authentication, session handling, and anonymous question support.
- Applied OOP principles for managing users, threads, and validation with file-based persistence.
- Stack: C++, OOP, File I/O

Library Management System [[Github](#)]

- Designed an interactive CLI app for book and user management using object-oriented principles.
- Using C++ implemented unique IDs, inventory tracking, and focused on writing clean, maintainable code following industry-standard software design patterns.

SKILLS

Languages: JavaScript, C++, Java, Bash

Web Development: Node.js, Express.js, React.js, HTML5, CSS3, EJS, Bootstrap

Databases: PostgreSQL, MongoDB

Tools & DevOps: Docker, Git/GitHub, Linux
